GBUS 306 Advanced Access

**Credit Hours:** 3

**Scheduled hours per week**
- Lecture: # 3
- Lab: #
- Other: e-course

**Catalog Course Description:** Using Microsoft Access, students are taught advanced Access data management to create fields, tables, queries, calculations, charts, forms and reports, data imports, exporting, and relationship databases, with an emphasis on critical thinking, problem solving, and decision making for marketing, finance, accounting, economics, and management. Additional “advanced hands-on projects and tests” are required.

**Prerequisites:** CS 101

**Corequisites:** None

**Course Learning Outcomes:**

- Apply advanced database concepts and technologies for the design, implementation, and management of information resources using Access.
- Apply ethical values and behavior for problem solving and decision making.
- Analyze and make informed decisions on advanced business queries and database reports using Access.
- Understand of the global business environment.

**Topics to be studied:**

**Access Core**

<table>
<thead>
<tr>
<th>Managing and Creating Tables</th>
<th>Creating Relationships between Tables</th>
</tr>
</thead>
<tbody>
<tr>
<td>Open and close objects in a database</td>
<td>Define a primary key in a table</td>
</tr>
<tr>
<td>Insert, delete, and move rows and columns in a table</td>
<td>Create a one-to-many relationship</td>
</tr>
<tr>
<td>Hide, unhide, freeze, and unfreeze columns</td>
<td>Specify referential integrity</td>
</tr>
<tr>
<td>Adjust table column width</td>
<td>Print, edit, and delete relationships</td>
</tr>
<tr>
<td>Design and create a table</td>
<td>Create a one-to-one relationship</td>
</tr>
<tr>
<td>Preview and print a table</td>
<td>View and edit a subdatasheet</td>
</tr>
<tr>
<td>Rename column headings</td>
<td></td>
</tr>
<tr>
<td>Insert a column name, caption, and description</td>
<td></td>
</tr>
<tr>
<td>Insert Quick Start fields</td>
<td></td>
</tr>
<tr>
<td>Assign a default value and field size</td>
<td></td>
</tr>
</tbody>
</table>

**Performing Queries**

- Design query to extract specific data from tables
- Use the Simple Query Wizard to create queries
- Modify queries
- Design queries with *Or* and *And* criteria
- Create a calculated field
- Use aggregate functions in queries
- Create crosstab, duplicate, and unmatched queries

**Creating and Modifying Tables in Design View**

- Create a table in Design view | Assign a default value
- Use the Input Mask Wizard and the Lookup Wizard
- Validate field entries
- Insert a Total row
- Sort records and print specific records in a table
- Complete a spelling check | Use the Help feature
- Find specific records in a table | Replace with other data
- Apply text formatting

**Creating Forms**

- Create a form using the Form button | form with related table
- Change views in a form | Print and navigate in a form
- Add records to and delete records from a form
- Create a form with a
- Customize a form with options at the Form Layout Tools tab
- Create a form using the Form Wizards

**Creating Reports and Mailing Labels**

- Create a report using the Report button
- Display a report in Print Preview
- Create a report with a query | Report Wizard
- Format and customize a report
- Group and sort records in a report
- Create mailing labels using the Label Wizard

**Modifying, Filtering, and Viewing Data**

- Filter data by selection and by form
- Remove a filter
- View object dependencies

**Importing and Exporting Data**

- Export Access data to Excel
- Export Access data to Word
- Merge Access data with a Word document
West Virginia University at Parkersburg

**Access Comprehensive**

**Designing the Structure of Tables**
Select the appropriate field data type based on analysis of source data
Disallow blank field values
Allow or disallow zero-length strings in a field
Create a custom format for text, number, and date fields
Create a custom input mask
Define rich text formatting for a memo field
Store history of changes to a memo field
Define and use an attachment field with multiple attachments

**Advanced Query Techniques**
Save a filter as a query
Create and run a parameter query to prompt for criteria
Add and remove tables to and from a query
Create an inner join, left join, and right join to modify query results
Create a self-join to match two fields in the same table
Create a query that includes a subquery
Assign an alias to a table and a field name
Select records using a multiple-value field in a query
Create a new table using a make-table query
Remove records from a table using a delete query
Add records to the end of an existing table using an append query
Modify records using an update query

**Creating and Using Custom Forms**
Create a custom form in Design view using form sections
Add fields individually and as a group
Move, size, and format control objects
Change the tab order of fields
Create tabbed pages in a form and insert a subform
Add and format a calculation to a custom form
Group and ungroup multiple controls
Adjust the alignment and spacing of controls
Add graphics to a form
Anchor a control to a position in the form
Create a datasheet form
Modify form properties to restrict actions allowed in records
Create a blank form | Add list boxes to a form
Sort records in a form and locate a record using wildcard characters

**Using Access Tools and Managing Objects**
Create a new database using a template
Add a group of objects to a database using an Application parts template
Create a new form using an Application Parts Blank Form
Create a form to be used as a template in a database
Create a table by copying the structure of another table
Evaluate a table using the Table Analyzer Wizard
Evaluate a database using the Performance Analyzer
Split a database
Print documentation about a database using the Database Documenter
Rename and delete objects

**Integrating Access Data**
Import data from another Access database
Link to a table in another Access database
Determine when to import versus link from external sources
Reset or refresh links using Linked Table Manager
Import data from a text files
Save import specifications
Export data in an Access table or query as a text files
Save and run export specifications
Save an object as an XPS file
Summarize data by using a PivotTable
Summarize data by using a PivotChart

**Uniform Course Syllabus (UCS)**
Import data to a new table
Link data to a new table
Use the Office Clipboard

**Building Relationships and Lookup Fields**
Create and edit relationships between tables including one-to-many, one-to-one, and many-to-many relationships
Define a table with a multiple-field primary key
Create and modify a lookup field to populate records with data from another table
Create a field that allows multiple values in records
Create single-field and multiple-field indexes
Define what is meant by normalization
Determine if a table is in first, second, and third normal form

**Create and Using Custom Reports**
Create a custom report in Design view using all five report sections
Move, size, format, and align control objects
Insert a subreport into a report
Add graphics to a report
Group records, including adding functions and totals
Modify section or group properties to control print options
Create and modify charts in a report
Create a blank report
Add hyperlinks and list boxes to a report
Change the shape of a tab control
Change the tab order of fields

**Performance Assessments**
Create Tables in a Cornerstone Catering Database
Create Relationships between Tables

**Advanced 306 Required Assessments**
Create Tables in a Clinic Database
Relate Tables and Create Forms in a Clinic Database
**West Virginia University at Parkersburg**

**Modify Tables**

**Design Queries**

**Design a Query with a Calculated Field Entry**

**Design a Query with Aggregate Functions**

**Design a Query Using Fields from Tables and a Query**

**Use the Find Duplicates Query Wizard**

**Use the Find Unmatched Query Wizard**

---

**Uniform Course Syllabus (UCS)**

**Modify Tables**

**Design Queries**

**Design a Query with a Calculated Field Entry**

**Design a Query with Aggregate Functions**

**Design a Query Using Fields from Tables and a Query**

**Use the Find Duplicates Query Wizard**

**Use the Find Unmatched Query Wizard**

---

**Bachelors of Applied Science in Business Administration (BASBA) Program Outcomes**

**Business Information Technology concentration (BIT):**

Communicate effectively and professionally both orally and in writing including complex report generation.

Demonstrate and integrate the use functional areas of business including accounting, economics, finance, global business, management, marketing and the legal environment of business.

Demonstrate the ability to work ethically, effectively, and respectfully with people of diverse backgrounds and with people whom have different roles, social affiliations, and personalities.

Use accounting software such as QuickBooks to manage accounting functions for statement preparation by accountants or external analysts.

Build on the competencies developed in the AAS in Business Technology to demonstrate competence in the use of electronic tools –hardware and software --to research, manage, and present information including word processing, spreadsheet, and presentation software.

Demonstrate and integrate the use functional areas of business including accounting, finance, management, and marketing in a professional business or administrative office.

---

**Performance Assessments**

Create Tables for a Property Management Database

Add Captions and Modify Field Properties

Add Records

Create Lookup Lists and Edit Relationships

Create Select Queries

Calculate in a Query and Use an Update Query to Increase Rents

Design and Create Forms

---

**Bachelors of Science in Business Administration (BSBA) Program Outcomes**

**General Business Specialization (GenBus):**

Communicate effectively and professionally both orally and in writing including complex report generation.

Demonstrate the use of quantitative skills in analysis of complex business decisions with a global perspective.

Demonstrate and integrate the use functional areas of business including accounting, economics, finance, global business, management, marketing and the legal environment of business.

Demonstrate the ability to work ethically, effectively, and respectfully with people of diverse background.
backgrounds and with people whom have different roles, social affiliations, and personalities.

Demonstrate the ability to solve complex business and organizational problems using programmed and non-programmed decision techniques using logical reasoning for evaluating information and data.

Apply best practices in management of functional areas including Human Resources, development and analysis of organizational design and structure, and leadership techniques to manage a team or department.

Demonstrate an understanding of complex marketing concepts including developing and deploying research studies for data collection and analysis, creating and deploying both B2C and B2B functions including procurement, supply chain management, and other marketing analysis.

Be admission-ready for a Master of Business Administration program if desired.

**Relationship of Course to General Education Learning Outcomes:**

<table>
<thead>
<tr>
<th><strong>Composition and Rhetoric</strong></th>
<th>Students illustrate a fundamental understanding of the best practices of communicating in English and meet the writing standards of their college or program-based communication requirements.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Science &amp; Technology</strong></td>
<td>Students successfully apply systematic methods of analysis to the natural and physical world, understand scientific knowledge as empirical, and refer to data as a basis for conclusions.</td>
</tr>
<tr>
<td><strong>Mathematics &amp; Quantitative Skills</strong></td>
<td>Students effectively use quantitative techniques and the practical application of numerical, symbolic, or spatial concepts.</td>
</tr>
<tr>
<td><strong>Society, Diversity, &amp; Connections</strong></td>
<td>Students demonstrate understanding of and a logical ability to successfully analyze human behavior, societal and political organization, or communication.</td>
</tr>
<tr>
<td><strong>Human Inquiry &amp; the Past</strong></td>
<td>Students interpret historical events or philosophical perspectives by identifying patterns, applying analytical reasoning, employing methods of critical inquiry, or expanding problem-solving skills.</td>
</tr>
<tr>
<td><strong>The Arts &amp; Creativity</strong></td>
<td>Students successfully articulate and apply methods and principles of critical and creative inquiry to the production or analysis of works of art.</td>
</tr>
</tbody>
</table>

10/20/2107

Students should be able to:

Demonstrate an understanding of the various advanced components of Access of varying complexity.

Analyze advanced business data and project outcomes to make informed decisions.

Understand advanced Access tables, forms, filters, and queries used by business decision makers.

Apply ethical values and behavior for problem solving and decision making.

Understand global business environments.

**Special projects or requirements of the course:**

- Hands-on Access Applications
- Online Assessment Access Theory Tests
- Access Advanced Performance Assessments Applications
West Virginia University at Parkersburg  Uniform Course Syllabus (UCS)
